

MonitorPro

Our Training Services

High Quality Training to enable you to make the most of your system

Training Services

EHS Data provides a range of training services, from beginner to advanced, to refresh skills, on site, at our offices or short focussed online courses.

Training Options

Introductory Session (typically 8hrs) - Gives delegates an introduction to the basic concepts of MonitorPro.

Intermediate Session (typically 16hrs) - This course gives delegates a more in-depth introduction to the system to better utilise the products many features.

Advanced Session (typically 8hrs) - Designed to train delegates to be competent administrators of the system.

MonitorPro Web Session (typically 4hrs) - This gives delegates all they information they need to effectively navigate around MonitorPro Web.

All courses can be offered at our offices in the UK or at the client's site(s) or office.

Bespoke Courses

We routinely provide clients bespoke courses tailored to suit their specific requirements. Our implementation consultants are never far from your part of the world, regularly travelling to clients to provide training and other services.

Quality Assured

All sessions are assessed and a certificate will be provided on successful completion. Successful completion of the Administrator courses will require the attendees to practically demonstrate a number of the skills learned in the session.

Feedback is always sought to continuously improve our services and products.

Additional Services

Additional services can be offered as part of a training visit or to complete a specific task/project. Our implementation consultants can help with services such as automation of data entry including setup of database importers, data cleansing tasks and legacy data transfer. Scoping of new data streams and offering advice on database creation and configuration.

Our Team

The technical strength of our company is at the heart of our business. Our team have been recruited from not only in IT but also from environmental and technical backgrounds, and all have a long track record of using, administering and developing environmental and sustainability data management software. Our developers are experienced in the specific fields of EHS data management, from waste management to contaminated land, mining and general industrial site monitoring. This enables the company to develop highly relevant solutions and quickly understand our clients' needs.

Online, On Site or at our offices, our training services are provided by highly experienced staff.

“We cannot thank Richard enough for his time spent with us or fault his performance with regards to getting us up and running with MonitorPro. Very professional, helpful and above all patient! Richard provided AMEC E&E with an excellent quality of service, indicated as follows. In addition, the hand-out materials have been very useful.”

Maria Fuhrmann, Senior Consultant AMEC, UK
