Bug Fixes

MonitorPro Web

List Table

- An issue with the 'Last Updated' Dropdown within the Data Properties that caused the data to display incorrectly, has been rectified.

Switching Databases

- Multiple issues relating to how certain parts of the application, in particular Dashboards and Mapping, would behave incorrectly when switching between Databases.

Manual Data Entry

- An instance in which the Source Dropdown on the Manual Data Entry page would not allow interaction has now been resolved.

Mapping

- Adding an Image Layer to a Map will no longer cause an intermittent error to occur.

14.2 has addressed 65 issues (both minor and major). There have been many areas of new functionality, improvements, and bug fixes. Major Improvements and Issues have been detailed in this document. Full details of all issues are available on request. All issues have been unit, peer and regression tested.
