MonitorPro at a Glance Environmental Intelligence to Drive Business Performance

MonitorPro is a world-class database management system dedicated to streamlining environmental monitoring and reporting. Developed by UK based company, EHS Data, MonitorPro has been used in the US by major mining companies since 2010. During that time continuous development, the latest technology with unparalleled customer support, has created an industry leading solution for environmental professionals.

One of the biggest challenges faced by responsible organisations is protecting the environment by reducing environmental impacts, meeting increased regulatory demands while saving on resources. Using the latest technology, MonitorPro delivers this plus a comprehensive view of environmental performance across all operations.

MonitorPro is trusted by organisations spanning five continents, with locations in: Australia, North America, Canada, South America, Europe, Asia and Africa.

Why the need for Environmental Monitoring in Mining in the US?

Increasingly, US mining companies recognise that careful and detailed management of their environmental impacts is crucial to managing corporate risk and attracting outside investment.

Mines and their associated processes in the US are well regulated to ensure the operations do not cause risk to the wider environment. These regulations require operators to conduct rigorous and continuous monitoring programs.

MonitorPro has an extremely flexible reporting engine which has enabled EHS Data to develop specific reporting templates, for exmaple the Discharge Monitoring Report (DMR) used specifically for NPDES permits.

Other states require self-monitoring report forms (SMRF) which are electronically generated by MonitorPro.

The western states contains some of the richest resources, prominently copper and gold. The MonitorPro system has a high number of users in that area.

Permits

Mine Stage

Exploration

Construction

Operation

Close Aftercare

The first and most obvious drivers are permits. These impose conditions on an operation which force it to manage its environmental impacts responsibly. There are various regulatory bodies around the world who grant permits that can be something of a minefield to navigate. But navigated it must be since no permit equates to no operation.

Vegetation clearance; impacts on cultural heritage; ground disturbance, water management (e.g. for drilling); weed management; spills and environmental accidents; loss and damage to topsoil required for eventual rehabilitation.

Land disturbance and local environment compared to baseline; ground water and surface water; dust; waste management; noise.

Air Quality (e.g. dust, SO2 and other emissions from plant); noise; ground water and surface water impacts; water use, waste rock management and subsequent acid rock damage and erosion; chemical use; environmental incidents (e.g. spills); waste management (identification and segregation of waste streams, recycling)

Seepage and toxic effects from waste rock and tailings; rehabilitation of the site.

Using Environmental Intelligence to Drive Business Performance

EHS Data and its **MonitorPro** Database Management Systems have been being used by companies in the US since 2010 During that time continuous development and additions to the suite of products and services has created an industry leading solution for environmental professionals.

The **MonitorPro** community in the area has grown to around 25 companies involved in the Metals & Mining industry. Regulation in the region means large volumes of data needs to be collected and reported to ensure detailed and accurate compliance.

Over this time EHS Data has gained significant insight into the demands placed upon these organisations in managing their environmental obligations, enabling us to offer a complete and tailored service to the industry.

The implementation of MonitorPro is part of our commitment of risk management towards our goal of zero impact to the local community and environment. MonitorPro helps to manage the varied data of our operations in and efficient and auditable manner.

Environmental Manager - US MonitorPro Client
