

# International Company Integrates MonitorPro with SAP Environmental Compliance

**MonitorPro** 

Environmental  
Data Management  
Software.

Solutions for Corporate  
Social Responsibility,  
Sustainability,  
& Energy.

*An international minerals and resource company with operations in Australia, Asia and Africa. MonitorPro has been in use for a number of years at two of the company's Australian operations based in Western Australia and Queensland.*

A professional environmental and sustainability information management solution, particularly suited for industries related to natural resources. **MonitorPro** is globally tested and used in water and waste water industries, as well as waste management, metals and mining.

## The Scope

During 2012, the international company began the process of implementing SAP software across its business, including the SAP Environmental Compliance (SAP EC) module. Not wishing to lose the superior usability and functionality of MonitorPro, the decision

was taken at both Australian mines to continue to manage their data collection and analysis processes using MonitorPro. The final selection of data required by SAP for reporting purposes therefore needed to be exported from MonitorPro to the SAP system.

**“Very professional and informative. Nothing is a problem for the EHS Data team.”**

*Senior Environmental Officer*

## Our Approach

To enable the export of data to SAP, EHS Data developed a customised export that can be recognised by the SAP software. MonitorPro's **User Defined Fields (UDFs)** were used to ensure that naming conventions translate between the two systems.

Finally, the existing **Scheduled Task function** in MonitorPro was used to set up a regular export of the required selection of data to SAP, with no human intervention required.

**MonitorPro is fully certified by the UK Environment Agency's rigorous quality standard for Environmental Data Software**

*Representation of the  
MonitorPro EHS System*

## The Result

The integration of the two systems allows the environmental professionals at several mine sites to continue using MonitorPro to manage their monitoring data in the same way as previously. This allows the continuation of simple and user-friendly scheduling of monitoring, importing of data, and use of a myriad of specialist tools for analysis and reporting.

MonitorPro automatically looks after the export of relevant data to SAP EC, where this is required for reporting across the business.
