

MonitorPro

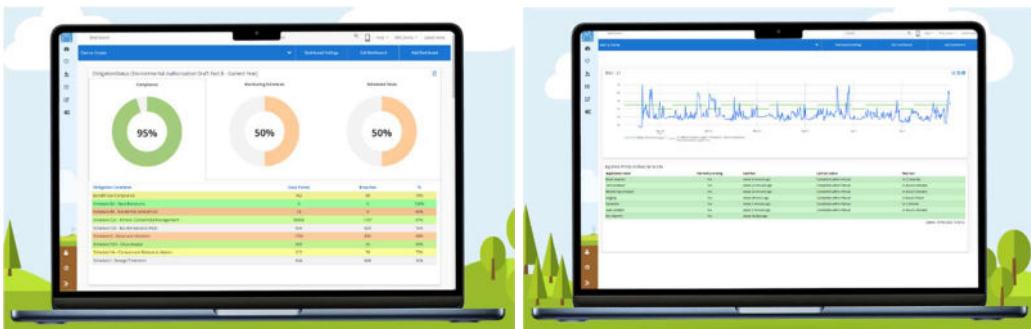

MonitorPro: Powerful Environmental Reporting for Utilities

Today's energy industry faces numerous challenges, from national and international regulations to the uncertainty of future climate policies.

Working closely with our utilities clients, it became clear that a collective reporting tool that could manage both high volume and periodic data in the same solution was needed. **MonitorPro** can offer simplification of the process so users can more easily access the data they need for regulatory and internal process reporting.

A streamlined and flexible approach to data collection, analysis and reporting

MonitorPro streamlines data integration and management by consolidating air emissions, cooling water, and process data into one platform, supporting integration with systems like Aveva PI and SCADA. It simplifies complex data for regulatory and internal reporting while its powerful calculation engine converts high-volume data into easily usable forms.

MonitorPro is Highly Configurable

With flexibility and ease of use at its core, **MonitorPro** is suitable for a range of data types and means that information with different frequency, format and origin can be managed in one single, central database.

MonitorPro Implementations in the Utilities Industry

MonitorPro has been successfully implemented with several clients in the utilities industry. These sites manage their environmental data much more efficiently, effectively, and appropriately. As a result, **MonitorPro** eliminates the need for spreadsheets and manual processes streamlining both internal and external data collection processes.

Power Station Implementations

For many years, EHS Data has supported power stations across the globe with **MonitorPro's** comprehensive, well integrated, and user-friendly system. Designed to help simplify complex data management and reporting requirements, our power station implementations demonstrate **MonitorPro's** full capabilities and effectiveness.

Water Treatment Implementations

Several water treatment companies have leveraged **MonitorPro's** capability to integrate high-volume logger and process data with periodic field and lab samples into a single, user-friendly tool for management, reporting, and dashboarding.

"The training and technical reports I have received from EHS Data are very helpful. I find the program very intuitive, and I have been able to further develop and expand on the data we capture."

Environmental Officer, Water treatment client.
