

Benefits of Hosting MonitorPro with EHS Data

Hosting your **MonitorPro** system with us at **EHS Data** removes several problems that frequently arise when hosting software on your own server, meaning your time is spent more effectively managing your environmental data and not with software problems.

How Hosting MonitorPro Can Help Your Business

Many of our clients are now utilising the benefits of outsourcing their application hosting. Including:

Fastest updates:

Hosted clients receive updates as soon as they are ready, removing the need to schedule updates via an IT department/provider.

Guaranteed access:

Superfast Gigabit connectivity to all our servers.

Fast response:

Having direct access with full permissions means we can quickly resolve any issues.

Best server administration:

Specialised routine server checks.

No middleman:

Our IT support staff and developers only support and develop **MonitorPro**, so are experts in what they do. Most application support staff in large organisations simply cannot be expected to have an in-depth knowledge of each bespoke application they are tasked with supporting. This can mean that support and assistance is less than perfect, and they simply act as a go-between. Simple issues can be protracted to resolve, and users can get frustrated.

No upgrade costs:

We don't charge an upgrade fee, whether it's a minor patch or major update.

Hosting with MonitorPro

We offer our hosted services in a choice of geographic location depending on where you are in the world. We have the choice of the UK, Canada, USA, and Australia so you're guaranteed to have a location close to you!

We manage the licensing side of things, including MSSQL, operating systems, and associated software required to use **MonitorPro** such as Microsoft Office. We use the latest, enterprise-level hardware and refresh our hardware every 2 years to ensure our clients always get the best performance and eliminate the possibility of failures.

No Downtime Issues

When hosting **MonitorPro** with us there are no regular periods of downtime and uptime is currently over 99.9%. Any **MonitorPro** updates or planned outages are completed out of hours for that geographical location ensuring you can access **MonitorPro** whenever you need to.

"We have recently switched to the EHS Data hosting platform which is far more superior to our previous internal hosting solution. Our team have already reported significant performance gains, especially in the operating speed."

MonitorPro client

Secure

We take the security of our data very seriously, as a result we have been ISO 27001 Certified since 2023, and Cyber Essentials Certified since 2024.

Certificate Number: 12281-ISMS-001
