

MonitorPro

MonitorPro Training

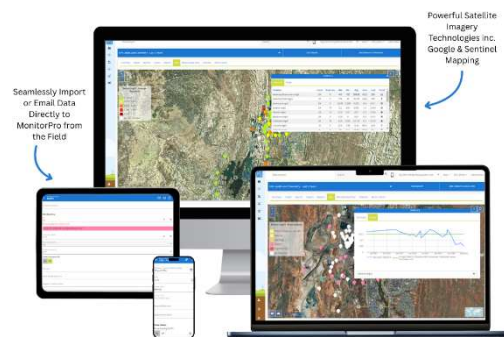

EHS Data has been delivering **MonitorPro** training for over 25 years. We have trained some of the biggest companies in various industries, including mining, waste management, governments and regulators, and utilities. Site sizes range from single sites to multi-site organisations, and training can be customised to suit your business's requirements.

Outstanding Training to Ensure You Get the Best Out of MonitorPro

EHS Data provides a range of **MonitorPro** training options including new user, administrator training, and refresher training. Training can be completed either online in easy-to-consume sessions, on site, or at our offices. All sessions are assessed, and a certificate is provided upon completion.

Our industry expertise and in-depth product knowledge mean we can help our clients make the most of their **MonitorPro** system. After initial implementation and training, many continue to invest further in **MonitorPro**, training both new users and supplementing the current users with refresher training.

This, in turn, means they continue to successfully manage their environmental data, compliance, and reporting requirements.

MonitorPro Training Options

MonitorPro New User (8 hours)

Tailored to new users and provides comprehensive **MonitorPro** training.
